

The eTrading platform for the NHS

Plug in the @UK eMarketplace and instantly complete up to 30% of your purchasing electronically.

@UK PLC's focus on supplier adoption means that we have thousands of suppliers and millions of line items available to be purchased immediately. Our rapid deployment team will work with you to identify the existing suppliers you wish to trade with and since many of these are your contracted suppliers, this means that they simply have to turn on your contracted prices and you can trade with them electronically.

Once you are up and running we will agree a supplier adoption strategy for the remainder of your suppliers - including small local traders. Working in partnership as you move your purchasing away from paper, our aim is that 100% electronic purchasing will become an increasingly achievable goal.

The @UK eMarketplace is integrated with all the popular finance systems including **SAP, Oracle, Agresso**, right through to less common systems and occasionally home built systems. Our in-house software team can support you through the integration process.

The system is simple to use for buyers and suppliers, but provides all the controls necessary for large organisations including; catalogue management, approvals, matching, product masking by log-on, and management information to ensure that you can capture your savings.

If you are serious about buying online and want to start getting some real efficiencies savings visit www.ukplc.net/health or call **0870 486 6000** to book a live demonstration.
